SUM-OF-ALL (List) Taxonomy

The ultimate list of all possible financed activities
from 26 global sustainable finance taxonomies

1,649 Unique Activities

from 2,539 total across 26 taxonomies
890 duplicate activities identified and resolved

Every unique economic activity appears exactly once. Where multiple taxonomies describe the same activity, the version from the most prominent taxonomy is kept. Prominence is determined by market significance (EU > China > Singapore > ...).

What is the SUM-OF-ALL?

The SUM-OF-ALL (List) Taxonomy is the ultimate list of all possible economic activities that appear in any of the 26 sustainable finance taxonomies tracked by ACT-ID.io. It provides a single, deduplicated reference list where every unique activity appears exactly once.

The purpose is to give market participants - issuers, investors, banks, SPO providers, and data vendors - a comprehensive reference of every financed activity that any taxonomy in the world recognises, without the confusion of seeing the same activity listed multiple times under different names.

How Deduplication Works

Many taxonomies describe the same economic activity using different words. For example, 'offshore wind electricity generation' appears in the EU Taxonomy, the China Taxonomy, the Singapore Taxonomy, and several others - each phrased slightly differently.

Rather than listing it multiple times, the SUM-OF-ALL identifies these duplicates and keeps one canonical version. Duplicates are identified through two methods:

1. Cross-taxonomy mappings: When our mapping analysis identifies two activities as equivalent (mapping type 'exact'), they are grouped together as the same activity.
2. Cluster analysis: Activities that are mapped to the same target across multiple taxonomies are grouped into clusters. Each cluster represents one real-world economic activity.

From each cluster, one version is selected as the canonical representative. The selection follows a prominence order based on the taxonomy's significance in global sustainable finance markets.

How Canonical Selection Works

When multiple taxonomies describe the same activity, the version from the highest-ranked taxonomy in the prominence order is kept as the canonical entry. All other versions are 'absorbed' - they still exist in the registry and can be viewed individually, but they do not appear in the SUM-OF-ALL list to avoid double-counting.

For example, if the EU Taxonomy, China Taxonomy, and Singapore Taxonomy all describe 'solar photovoltaic electricity generation', the EU version is kept because the EU

Taxonomy is ranked highest. The China and Singapore versions are absorbed into the EU canonical entry, and their detail pages show which canonical activity they were absorbed into.

Prominence Order

The following table ranks all 26 source taxonomies by their prominence. Prominence is determined by the taxonomy's role in global green bond markets, its regulatory significance, and the size of the market it serves. When two taxonomies describe the same activity, the version from the higher-ranked taxonomy becomes canonical.

#	Taxonomy	Rationale
1	EU Taxonomy	Preeminent global standard; basis for EU Green Bond Standard
2	China Taxonomy	Largest green bond issuer (\$177B+ in 2025)
3	Singapore Taxonomy	Major APAC bond market; Singapore-Asia Taxonomy
4	Hong Kong Taxonomy	Major APAC financial centre
5	ASEAN Taxonomy	Regional standard for Southeast Asia
6	Australian Sustainable Finance Taxonomy	Major developed market taxonomy
7	South African Taxonomy	Largest African financial market
8	Brazil Taxonomy	Largest Latin American economy
9	Thailand Taxonomy	Significant ASEAN market
10	Indonesia Taxonomy	Largest ASEAN economy
11	Malaysia CCPT	Established climate taxonomy
12	Philippines SFTG	Growing green bond market
13	Rwanda Taxonomy	Pioneer African green taxonomy
14	Sri Lanka Green Finance Taxonomy	Emerging market taxonomy
15	Mongolia Taxonomy	Emerging market taxonomy
16	Fiji Green Finance Taxonomy	Pacific island climate taxonomy
17	Ghana Green Finance Taxonomy	West African green taxonomy
18	Mexico Sustainable Taxonomy	Major Latin American market
19	Costa Rica Sustainable Finance Taxonomy	Central American taxonomy
20	Panama Sustainable Finance Taxonomy	Central American taxonomy
21	MDB Common Principles	Multilateral development bank standard
22	Common Ground Taxonomy	EU-China joint reference

#	Taxonomy	Rationale
23	CBI Green Bond Taxonomy	Climate Bonds Initiative green taxonomy
24	CBI Social and Sustainability Bond	CBI social and sustainability taxonomy
25	Climate Bonds Resilience Taxonomy	Climate Bonds resilience framework
26	NEI Activities for Labelled Bonds	Industry activity nomenclature

Key Statistics

- 2,539 total activities across 26 taxonomies
- 1,649 unique activities in the SUM-OF-ALL
- 890 duplicate activities identified and absorbed
- 35% overlap across taxonomies

Licensing & Terms of Use

The ACT-ID registry and the SUM-OF-ALL (List) Taxonomy are provided under the following terms:

Public Use (Free)

Act IDs may be freely referenced in bond frameworks, SPO opinions, annual reports, academic papers, and any other non-commercial disclosure or publication. You may quote Act IDs, link to ACT-ID.io, and include them in public-facing documents at no cost.

Commercial / Vendor Use (Licence Required)

If you embed Act IDs into a commercial product or service - including data platforms, screening tools, analytics dashboards, or any product sold to third parties - a simple vendor licence is required. This ensures the registry remains financially sustainable and well-maintained.

Research & NGO Use

Academic researchers, NGOs, and multilateral organisations may qualify for free commercial-equivalent access. Contact us to discuss.

No Redistribution

This PDF and the underlying data may not be redistributed, resold, or repackaged without a licence. Linking to the public registry at act-id.io is always permitted.
